Intelishade

Solar Shading System

**Project details**

GDL have recently completed the design, manufacture and installation of an Intelishade ISEF-200 Fixed horizontal blade elliptical solar shading system, on behalf of Henry Boot Construction, for this prestigious hotel spa on the outskirts of Harrogate.

**Project overview**

A privately owned luxury hotel set in 300 acres of landscaped gardens and woodland, the brand new spa was opened in 2016, and is regarded as one of the finest in the country. The design challenge GDL had to meet was to carefully balance the practical benefits of a bespoke solar shading system, whilst simultaneously maintaining an aesthetically agreeable appearance within the natural environment. In total, 47 metres of uniquely designed and extruded elliptical blade has been installed, minimising solar gains and contributing to the relaxing and holistic experience that the hotel spa offers to its guests.

**Benefits of using GDL Products on the project**

- Bespoke design, meeting the exacting standards of a luxury 5-star hotel
- In-house manufacture and installation, ensuring the design proposal is executed to the maximum effect
