Linear Slot Diffusers

Project details

The new £11.9 million Brimmond Primary School development is set to open for the new school year this September 2015. The school will accommodate the pupils and staff of both Bucksburn and Newhills Primary Schools. The two Schools were amalgamated and temporarily housed at the Bucksburn site permitting the demolition of Newhills School so the new build Brimmond School could take place. The new School will cater for 420 pupils and 80 nursery places, the site also includes extensive sports facilities including all weather courts and pitches and landscaped exterior spaces.

Project overview

GDL supplied our Intelivent Wall Units and our Penthouse Turrets on this project, all in varying sizes to meet the ventilation demand of the occupied spaces. Our in house design team assisted making the correct system choices for the school. Our Intelivent products are particularly effective in school classrooms, sports halls and assembly areas where occupancy varies throughout the day and a controlled ventilation rate is required.

Benefits of using GDL Products on the project

- The Wall Units and Penthouse Turrets work in harmony allowing a controlled environment whilst maintaining security at the school with no open windows.
- Our Intelivent Turrets offer a balanced supply of fresh air whilst removing warm stale air, an ideal product to ventilate a sports halls/assembly areas effectively and efficiently.
